Batent No. 6747137

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANI
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 107196.132
CURRENT APPLICATION NUMBER: US/09/248,796A
PRIOR PAPLICATION NUMBER: US 60/074,725
PRIOR PAPLICATION NUMBER: US 60/096,409
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 17937
LENGTH: 311
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Parent No. 67034 Application US/09270767

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 13377, Application US/09489039A
Patent No. 6610836
Patent No. 6610810
Patent No. 6610810

GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/489,039A
CURRENT APPLICATION NUMBER: US 60/117,747
PRIOR RAPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342

SEQ ID NO 13377
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 61085, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

Sequence 2570, Application US/09540236

Patent No. 6673910

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATAR

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 2709.2005-001

CURRENT APPLICATION NUMBER: US/09/540,236

CURRENT FILING DATE: 2000-04-04
                                                                                                                                                                                        Sequence 4688, Application US/09328352
Fatent No. 6562958

-! FUNCTION: Key component of the proton channel; it may play a direct role in the translocation of protons across the membrane.
-!- CATALYTIC ACTIVITY: ATP + H(2) O + H(+)(In) = ADP + phosphate + H(+)(Out).
-!- SUBUNIT: F-type ATPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunits: alpha(3), beta(3), gamma(1), delta(1), epsilon(1). CF(0) has three main subunits: a, b and c.
-!- SUBCELLULAR LOCATION: Integral membrane protein. Mitochondrial

DIESTARY MEMORIAGE.

Weakness, ataxia, and retinitis pigmentosa (NARP) [WIM:551500].

DISEASE: Defects in MTATP6 are a cause of Leber's hereditary optic
DISEASE: Defects in MTATP6 are a cause of Leber's hereditary optic
DISEASE: Defects in MTATP6 are a cause of Leber's hereditary optic
atrophy. LHON is a maternally inherited disease resulting in acute
bliateral blindness due to retinal degeneration predominantly in
young man. Cardiac conduction defects and neurological defects
have also been described.

DISEASE: Defects in MTATP6 are a cause of Leigh syndrome (LS)
MIM:256000]. LS is a severe neurological disorder characterized
by bilaterally symmetrical necrotic lesions in subcortical brain

DISEASE: Defects in WTATP6 may be a cause of familial bilateral striatal necrosis (FBSN). FBSN is a neurological disorder resembling Leigh syndrome.

Name-MTATP6; Synonyms-ATP6, ATPASE6; Sus scroid (Pig). 226 AA STANDARD; RESULT S ATP6 PIG ID ATP6 PIG OCCOSSION

Mitochondrion. Sukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammalia, Eutheria, Cetartiodactyla, Suina, Suidae, Sus. NCBI_TaxID=9823,

```
-1- RUBONIT: F-type ArPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunits: alpha(3), beta(3), gamma(1), delta(1), epsilon(1). CF(0) has three main subunits: a, b and c (By similarity).
-1- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-1- STHILARITY: Belongs to the ArPase A chain family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          H(+)(Out).
-!- SUBUNIT: F-type ATPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunits: alpha(3), beta(3), gamma(1), delta(1), epsilon(1). CF(0) has three main subunits: a, b and c.
-!- SUBCELLULAR LOCATION: Integral membrane protein. Mitochondrial
                                                                                                                                                                                                                                                                                                                                                          [3]

Biochem. Genet. 24:385-396(1986).
-!- FUNCTION: Key component of the proton channel; it may play a direct role in the translocation of protons across the membrane.
-!- CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

core - and CF(0) - the membrane proton channel. CF(1) has five subunits: alpha(3), peta(3), gamma(1), delta(1), epsilon(1). CF(0) has three main subunits: a, b and c (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).

-!- SIMILARITY: Belongs to the ATPase A chain family.

-! CATALYTIC ACTIVITY: ATP + H(2)0 + H(+)(In) = ADP + phosphate + H(+)(Out).

-!- SUBUNIT: F-type ATPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunite: alpha (3), peran (1), delta(1), epsilon(1).

-!- SUBCELUCIAR LOCATION: Integral membrane protein (By similarity).

-!- SIMILARITY: Belongs to the ATPase A chain family.

"Single modleotide polymorphisms over the entire mtDNA genome that increase the power of forensic testing in Caucasians.";
Int. J. Legal Med. 0:0-0(2004).
-!- FUNCTION: Key component of the proton channel; it may play a direct role in the translocation of protons across the membrane (By similarity).
-!- CARTANTIC ACTIVITY: ATP + H(2)O + H(+)(IN) = ADP + phosphate +
                                                                                                                                                                                                                                         -!- SUBUNIT: F-type ATPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunits: alpha(3), beta(3), denma(1), delta(1), epsilon(1). CF(0) has three main subunits: a, b and c (By similarity).
-! SUBELLIULAR LOCATION: Integral membrane protein (By similarity).
-!- SIMILARITY: Belongs to the ATPase A chain family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    H(+) (OUE).

-1- SUBUNIT: F-type ATPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunites alpha(3), bened(3), gamma(1), delta(1), epsilon(1). CF(0) has three main subunites: a, b, and c (By similarity).
-1- SUBCELULIAR LOCATION: Integral membrane protein (By similarity).
-1- SIMILARITY: Belongs to the ATPase A chain family.

C. -: CALCALLY

C. -: SUBUNIT: F-type ATPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five core - and CF(0) - the membrane proton channel. CF(1) has five care - and CF(0) - the membrane proton channel. CF(1) has five care alpha(3), beta(3), gamma(1), delta(1), epsilon(1). CF(0)

C. -: SUBCRIUGAR LOCATION: Integral membrane protein (By similarity).

C. -: SIMPLIANITY: Belongs to the ATPase A chain family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2, Application US/09187999A
Patent No. 6482646
BATEN LINGOMATION:
APPLICANT: Gindullis, Frank
APPLICANT: Gindullis, Frank
APPLICANT: Maier, Iris
TITLE OF INVENTION: Proteins that Interact with Nuclear Matrix
TITLE OF INVENTION: Proteins and Function as Transcriptional Activators
FILE REFERENCE: CL-1321
CURRENT APPLICATION NUMBER: US/09/187,999A
CURRENT FILING DATE: 1998-11-06
NUMBER OF SEQ ID NOS: 39
SOFTWARE: Microsoft Office 97
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ·
